DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-24, drawn to a method for producing a lens, classified in class
 359, subclass 19.
- II. Claims 25-38, drawn to a tunable lens, classified in class 349, subclass 200 (this invention has been elected and examined in the application of serial number 10/141582).

The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as process of making and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case a tunable lens (invention II) can be made by different process in which an inhomogeneous layer of liquid crystal droplets (same droplet size) with varying (inhomogeneous) thickness (as a lens of Takahashi et al. US 5097352A).

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/7\$0,207

Art Unit: 2871

Group I contains claims directed to the following patentably distinct species of the claims invention:

A: Claims 1-14 drawn to forming a lens with a liquid crystal layer of inhomogeneous droplet sizes without using photo-mask

B: Claims 15-24 drawn to forming an inhomogeneous layer with plural portions of different types of liquid crystal molecules (not different droplet sizes).

If Group II is elected, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of claims is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

Application/Control Number: 10/780,207

Art Unit: 2871

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to HOAN C. NGUYEN whose telephone number is (703) 306-0472.
